

## 1. New Sign up cycle:

### a. First open page

#### i. The design will have minor changes which are:

1. A welcome note in the top
2. Continue with FB button

#### ii. New features:

1. Continue with FB: Their will be an option for customers to sign in with FB or Sign up.

a. Sign in: he will open the app normally with his data and codes as normal

b. Sign up: he will be directed to a new page where the page is filled with his data and phone number will be empty and their will show a popup asking the customer to fill his phone number

### b. Generating a code page

- i. In case the customer chose skip registration. He will be allowed to scroll through the app but at the page of generating a code, once he clicks on "Generate a code/ (وفر)", the customer will be asked to register in order to get a code, if he's not logged in.
- ii. After registering, the app should return to the page of get a code and a pop up at page get a code
- iii. Change year view in sign up from current to have a much clearer change year option

## 2. Scans per Body organ screen

- a. We'll add a new screen with a new category under the types of scans where the organ name will be included. The provider services will appear based on the organ you chose. Ex. اشعة then رنين مغناطيسي then اشعة then معامل تحاليل و مراكز اشعة. then the new screen will have the organs name such as علي المخ , علي الرقبة

## 3. Pharmacies filter

- a. We will add a separate sort by list in the pharmacies, where the customer can choose between three types of filters;
  - i. Alphabetically
    1. It arranges the pharmacies according to an alphabetical order.

ii. Highest discount in the local drugs

1. It arranges the pharmacies according to the discount percentage of local drugs descending

iii. Highest discount in the imported drugs

1. It arranges the pharmacies according to the discount percentage of imported drugs descending

iv. Highest discount in the cosmetics

1. It arranges the pharmacies according to the discount percentage of cosmetics descending

4. In any providers list we will change the design of the page.

a. we will add a button "وفر..." The button will include the word "وفر" next to it the calculated saved amount from this specific service.

b. We will add two sentences as an extra info about the provider.

c. We will show the ratings of the provider right below the extra info and no of that will be clickable.

d. Will change the design of rating from star to NPS (according to the design)

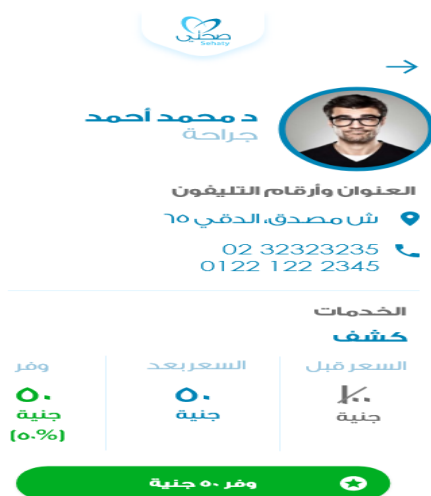

e.

f. Getting the code page will have a new design without changing any functionality.

g. The button "Generate a code" will be named "You've saved"

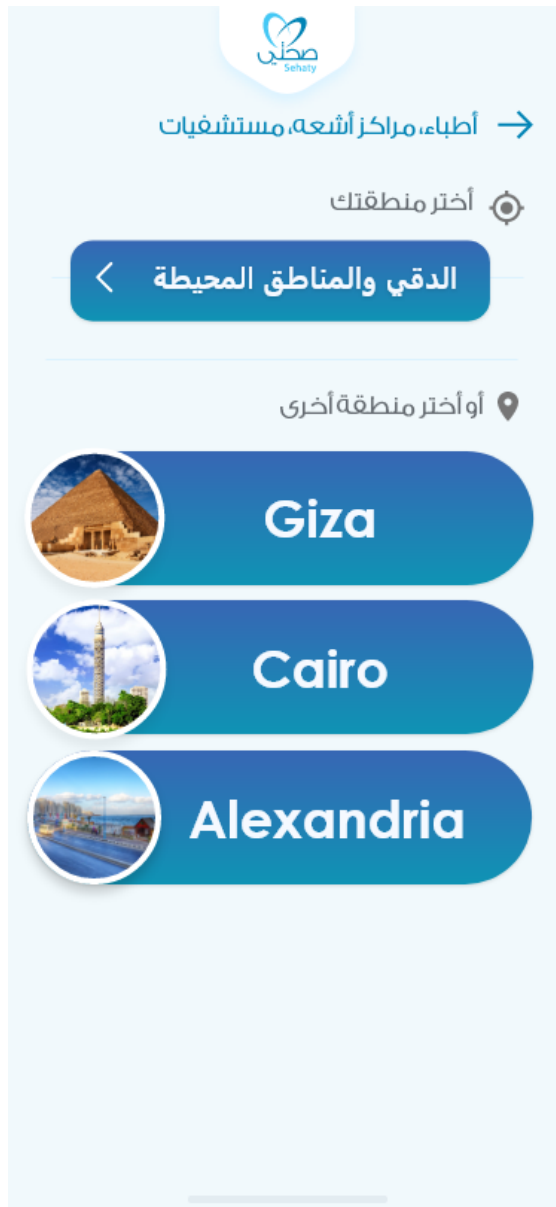

h. We will add two sentences as an extra info about the provider.

i. We will show the ratings of the provider right below the extra info and no of that will be clickable.

j. Will change the design of rating from star to NPS (according to the design)

5. Geo-Location:

We want to add a new feature to our app, where Sehaty app can access geo-location of mobile holder as following scenarios

- a. First Open
- i. App will show a pop up once ap is opened asking the customer to enable the usage of the geo-location, leading to two options:

1. Yes

On page of governorates, there will be a button “use your current location”, once the customer clicked it, the app will skip page governorates and are and will show the third pages based on his location as a filter

2. No

On page of governorates, there will be a button “use your current location”, once the customer clicked it, a pop up will show up asking for his request

- a. If yes: the app will skip page governorates and are and will show the third pages based on his location as a filter

b. If No: Customer will go through the

cycle normally

b. Open

Their will always be on the page of governorates, their will be a button “use you current location”, once the customer clicked it, the app will skip page governorates and are and will show the third pages based on his location as a filter
